Groundwater Monitoring

little dipper Water Level Meter

Lengths: 50ft or 15m, 75ft or 22m, 100ft or 30m

Warranty: 3 years, probe 1 year

The **little dipper** is a hand held unit designed for **easy portability** used to measure **static** and **falling head levels** in wells and boreholes. In order to keep this unit **compact**, it is only available in select tape lengths – imperial (engineering scale) or metric.

The **little dipper** in **static** mode is used for measuring the depth of water in wells, boreholes and standpipes. The **little dipper** in **drawDown** mode may be used for measuring **falling water levels** during purging, well development and for low flow sampling; helping to protect your pumps from damage caused by dry running.

Features included with the little dipper:

- **Electronic Module (IP65)** – mode selectable for **static** and **drawDown** levels, removable for easy cleaning and servicing
- **Probe (IP68)** – fully pressure/depth rated, 5/8", **field replaceable**
- **Steel Tape** – high tensile steel, jacketed with **Polyethylene**, high break strength, stretch resistant and lifelong legibility – markings in metric (mm) or engineering scale (1/100')
- **Padded Mini Carry Case** – to protect your **precision** water level meter from the elements
- **Hanger** – to support the meter at the well head
- **Handle** – soft comfort foam grip
- **Winding Handle** – custom made for **easy** rewinding with gloved hands

Available Option:

- Narrow 3/8" probe (not removable)
